# Battery BMS safety standards

What are functional safety standards in battery management systems (BMS)?

01. Functional Safety Standards (ISO 26262) Functional safety standards ensure that safety-related functionality in Battery Management Systems (BMS) is maintained throughout its lifecycle, mitigating risks that could compromise the system's reliability and safety.

What is a battery management system (BMS)?

Battery Management Systems (BMS) are at the heart of electric vehicle (EV) safety, ensuring the efficient and reliable operation of lithium-ion batteries. As batteries become more powerful and complex, maintaining their safety, performance, and longevity is critical.

What are battery-specific standards?

Battery-specific standards address the design, testing, and safety requirements of battery systems, which directly influence the functionality and safety of the BMS. UN 38.3 governs the transport of lithium batteries and mandates specific safety tests to ensure safe handling during shipping.

What are BMS safety recommendations?

BMS Safety Recommendations BMS includes battery cells, power electronic equipment, controller and monitoring units, and energy management units. Therefore, any abnormality or accident can cause a BMS-related accident. It is critical to take appropriate precautions as a rule for every BMS component.
