# Does ASEAN have wind and solar complementarity with Chinese solar container communication stations

How much solar power does the ASEAN region have in 2022?

The ASEAN region has 27 GW of solar and 6.8 GW of wind installed capacity in 2022, representing less than 1% of the approximately 30,523 GW of solar and 1,383 GW of wind theoretical potential estimated by the National Renewable Energy Laboratory (NREL).

Is there a correlation between wind and solar energy in China?

By calculating the Kendall rank correlation coefficient between wind and solar energy in China, the study mapped the spatial distribution of wind-solar energy complementarity. Han et al. proposed a complementary evaluation framework for wind-solar-hydro multi-energy systems based on multi-criteria assessment and K-means clustering algorithms.

What is the ASEAN Plan of action for energy cooperation (Apaec)?

The ASEAN Plan of Action for Energy Cooperation (APAEC) Targets Scenario projects capacity addition from renewables by 2040 will be 185 GW, with solar contributing to an additional 45 GW, and wind will reach approximately 9 GW capacity. Both solar and wind are expected to account for 15% of power generation capacity by 2040.

Are solar and wind the future of ASEAN?

Solar and wind are among the most promising technologies capable of creating new markets, fostering job creations, enabling a just energy transition and ensuring a resilient, energy-secure ASEAN. Strong policy support and government commitments are critical to driving robust action and progress in renewable deployment.

Southeast Asian nations require stronger policy support to stimulate solar and wind development, creating a more dynamic demand and supply for clean energy.

Download Citation | On May 1, 2025, Xingzhi Yuan and others published Does the ocean have better suitability for wind-solar energy complementarity than land? A regional study in East ...

This study used global climate models to evaluate the impact of climate change on the complementarity, stability, and hybrid power generation potential of wind and solar energy ...

Utilizes the copula function to settle the Spearman and Kendall correlation coefficients combined with the fluctuation coefficient to measure the wind-solar ...

Land-based wind-solar complementarity is well established, but its marine counterpart remains underexplored as renewable energy development transitions from land to ...

The intermittent nature of wind and solar sources poses a complex challenge to grid operators in forecasting electrical energy production. Numerous studies have shown that the ...

Which regions exhibit greater complementarity of wind and solar energy? For instance, Ren et al. employed an evaluation index considering the fluctuation state and corresponding amplitude to ...
