
Is it necessary to equip NAS with an uninterruptible power supply

What is the best uninterruptible power supply for a NAS?

The CyberPower CP1500PFCLCD is one of the best uninterruptible power supplies to buy for a home office with a NAS. You'll be able to take advantage of the 1500 VA battery pack to power the NAS for a good while before needing to shut it down.

Should I buy an ups or a NAS?

Note: If your data is important to you, an UPS is the cheapest security blanket you can buy. It ensures that consistent power is delivered to your NAS and, in the event of a power outage, it can allow you to safely power down your NAS and not risk damage long-term.

Can a ups connect to a NAS with a data connection?

By connecting the UPS to a NAS with a data connection, the UPS can tell the NAS how much battery is left and have it safely shut down. It's not just a NAS the UPS can provide power for. Anything with a compatible cable will be able to connect to and draw from the device.

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) protects you not only from blackouts, but also fluctuations in the electric power supply - power surges and dips or brownouts, for example. Blackouts are not good for your data (you may have a database update underway when the power goes out).
