
Libya shuts down inverter connection to telesolar container communication stations

What are hidden communication devices in solar energy equipment?

U.S. energy officials have discovered hidden communication devices in solar energy equipment supplied from China. These are primarily inverters used to connect solar panels and wind turbines to power grids, as well as batteries, heat pumps, and chargers for electric vehicles.

Are Chinese-made solar inverters a supply-chain vulnerability?

Leading renewable energy operators worldwide are confronting a disturbing supply-chain vulnerability: undocumented communication modules found in Chinese-made solar inverters and batteries.

What happened to solar inverters in November 2024?

In November 2024, those fears became reality. Solar inverters in the U.S. and other countries were mysteriously disabled--from China. The incident, reported by three sources, revealed just how easily a foreign actor could reach across borders and influence local power supplies. Reuters could not verify the scale of the disruption.

Are there undocumented communication devices in solar panels?

Over the past 9 months, undocumented communication devices (including cellular radios) have also been found in solar panels from several Chinese suppliers. The exact number of inverters and batteries tested, as well as the names of the suppliers, were not provided by the source.

A team of engineers in the U.S. took apart a solar power inverter. It looked like any other--sleek, compact, humming with the promise of sustainability. But buried deep inside, ...

The initial introduction toward the sustainable infrastructure has opened the door to realizing the new innovations in remote communication networks. The conventional power ...

The rogue components in these power inverters provide additional, undocumented communication channels that could allow ...

Recent investigative reports have uncovered concerns in the renewable energy sector: rogue communication devices found embedded within solar power inverters and ...

Supply Chain Security in Energy: Assessing the "Ghost in the Machine" Risk An in-depth analysis for executive leadership and board ...

Using the rogue communication devices to skirt firewalls and switch off inverters remotely, or change their settings, could destabilise power grids, damage energy ...

Supply Chain Security in Energy: Assessing the "Ghost in the Machine" Risk An in-depth analysis for executive leadership and board members on undisclosed communication ...

Undocumented communication devices have been discovered inside solar inverters and batteries manufactured in China, according to two sources familiar with the ...

The rogue components in these power inverters provide additional, undocumented communication channels that could allow firewalls to be circumvented remotely, with ...

U.S. energy officials have discovered hidden communication devices in solar energy equipment supplied from China. These are ...

U.S. energy officials have intensified scrutiny of Chinese-manufactured components in renewable energy infrastructure after the identification of undocumented ...

U.S. energy officials have discovered hidden communication devices in solar energy equipment supplied from China. These are primarily inverters used to connect solar ...

LONDON: US energy officials are reassessing the risk posed by Chinese-made devices that play a critical role in renewable energy infrastructure after unexplained ...

LONDON: US energy officials are reassessing the risk posed by Chinese-made devices that play a critical role in renewable energy ...

A team of engineers in the U.S. took apart a solar power inverter. It looked like any other--sleek, compact, humming with the ...
