
New energy storage introduced

Will China develop new energy storage systems between 2025 and 2027?

BEIJING, Sept. 12 -- China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ensure the stability of new-type power systems.

Why is China moving to a new type of energy storage?

The move is part of China's broader push toward a green, low-carbon energy transition as well as high-quality economic and social development. It builds on significant growth in the sector. As of the end of 2024, the country's installed capacity of new-type energy storage had reached 73.76 million kilowatts, according to official data.

What is the energy storage plan?

The plan outlined 21 key measures, including scaling up energy storage applications in power generation and grid infrastructure, accelerating technological innovation, and improving standardization. It also emphasized talent development and enhancing international cooperation in the sector.

Why did China move to a green & low-carbon energy transition?

It also emphasized talent development and enhancing international cooperation in the sector. The move is part of China's broader push toward a green, low-carbon energy transition as well as high-quality economic and social development.

Naxion Energy (formerly Sodian Energy) has introduced its sodium-ion-based energy storage systems for the residential and commercial & industrial sectors. The storage ...

As HiTHIUM's flagship annual event, Eco-Day reflects the company's rapid rise to the Top 2 position in global energy storage battery shipments.

Sungrow's energy storage PCS integrated system introduced multiple hardware and software innovations tailored for flywheel storage, achieving key breakthroughs in ...

Recently, several projects--including Shanghai Electric Group's 5GWh all-vanadium redox flow battery project, the Washi Power sodium-ion battery base project, and ...

China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ...

"China's advances in new-type energy storage are moving from isolated breakthroughs to a more systematic framework," said Rao Hong, chief scientist at China ...

As HiTHIUM's flagship annual event, Eco-Day reflects the company's rapid rise to the Top 2 position in global energy storage ...

A 500 MW / 2,000 MWh standalone BESS in Tongliao, Inner Mongolia, has begun commercial operation following a five-month construction period, reflecting China's ...

China's energy storage capacity is expanding to facilitate the utilization of growing renewable power. The country's installed new-type energy storage capacity had reached ...

The Chinese PV manufacturer is stepping up its energy storage push with a new Beijing subsidiary capitalized at RMB 300 million (\$42 million).

Megapack is an electrochemical energy storage device that uses lithium batteries, a dominant technical route in the new-type energy storage industry. Tesla's vice-president Tao ...
