## Outdoor power split type

What is a multi split system?

A Multi Split System is a compact yet powerful air conditioning with a single outdoor unit simultaneously supporting multiple indoor units. It is a remarkable all-rounder for space-saving, style, and energy efficiency. What is Multi Split? Key Features Product Lineup FAQ

What is the difference between a split and a multi-split air conditioner?

With split type air conditioners, indoor and outdoor units are required for each room. This can create problems when there is limited installation space. With the multi-split type, however, a single outdoor unit can power several indoor units. A multi-split system shares its capacity flexibly between the indoor units which are operating.

Can a multi-split outdoor unit be connected to an indoor unit?

In most family homes, it is unusual for all indoor units to operate together. This means a single multi-split outdoor unit can easily be connected to indoor units which exceed its rated capacity. In fact, our Super Multi NX can be connected at 162% to 181% of its standard output. The outdoor unit divides capacity between indoor units as needed.

What is LG multi split air conditioning system?

LG Multi Split air conditioning system installed in a modern home exterior for efficient cooling and heating. A Multi Split System is a compact yet powerful air conditioning with a single outdoor unit simultaneously supporting multiple indoor units. It is a remarkable all-rounder for space-saving, style, and energy efficiency. What is Multi Split?
