# Paramaribo base station communication query

What is a base station information query interface?

The base stations information query interface is used to provide location based services with cellular base station information, such as Base Station ID, Time Advance, and other parameters that can be used to compute the geographical position of the mobile subscriber.

Do communication base stations perform post-earthquake functionality using Bayesian network?

A method to evaluate the post-earthquake functionality of communication base stations using Bayesian network is developed. The dependence between the equipment and its hosting building structure, and the impact of power outages are considered. The method is validated using seismic damage data from the Ludian Earthquake.

What causes a communication base station to fail?

Power interruption is a significant contributor to communication base station functional failure.

Communication systems closely rely on power systems, and power outages can result in widespread station interruptions. In the case of the earthquake in Changning County, 90% of disrupted base stations experienced power interruptions as the cause.

Can a Bayesian network be used to assess communication base stations?

This study applies a Bayesian network method to the functionality assessment of communication base stations. The method integrates Fault tree analysis and Bayesian network, and its performance is validated through the observed seismic damage data of the Ludian earthquake.

A Radio Base Station (RBS), also known as a base transceiver station (BTS), is a key component of a cellular network ...

Piters, Ankie (2025): Basic measurements of radiation at station Paramaribo (2023-06) [dataset].

What is a Base Station? A base station is a critical component in a telecommunications network. A fixed transceiver that acts as the central ...

There is a lack of models that can fully evaluate the post-earthquake functional states of base stations with the consideration of the dependencies between different ...
