What is a solar inverter?

Solar inverters are the heart of any solar energy system, converting the direct current (DC) electricity generated by solar panels into alternating current (AC) power for homes, businesses, or utility grids.

Do you need a solar inverter?

Solar panels by themselves produce direct current (DC) under sunlight. Direct current can power lights or a fridge but it's not suitable for sensitive electronics like laptops or TVs. That's why you'll need a solar inverter to convert direct current to alternating (AC).

How do I choose a solar inverter?

Ensure the inverter matches the specifications of your solar panels and overall system capacity. For example, a mismatch between panel wattage and inverter capacity can lead to energy loss or system inefficiency. ESAS experts can help you ensure perfect compatibility. Look for inverters with high efficiency ratings, typically above 95%.

How do solar inverters work?

In a large-scale utility plant or mid-scale community solar project, every solar panel might be attached to a single central inverter. String inverters connect a set of panels--a string--to one inverter. That inverter converts the power produced by the entire string to AC.

What is a solar inverter? Let's find out why a solar inverter is a very vital component of a solar energy system.
