
Solar module prices hit a record low

Are solar and energy storage prices about to rise?

Solar and storage prices are about to rise after a year and a half of record lows, according to new data from Wood Mackenzie. Equipment procurement costs for solar and energy storage will jump around 9% starting in Q4 2025, marking the end of the bargain pricing developers have enjoyed for the last 18 months.

Why are solar & energy storage costs rising in Q4 2025?

Equipment procurement costs for solar and energy storage will jump around 9% starting in Q4 2025, marking the end of the bargain pricing developers have enjoyed for the last 18 months. That's because China is changing the rules. Wood Mackenzie points to three major drivers behind the coming spike: Polysilicon consolidation.

Why are local solar groups falling this year?

Shares of local solar groups have fallen this year as module prices drop. Gross margins at JinkoSolar, for instance, fell to 3.1 per cent in the year to September, down from 16 per cent in 2024. The outlook remains bleak, too.

Why did Chinese solar panels lose \$1.5bn in the first half?

Chinese factories, however, produced more than double that capacity. Small wonder the four largest local solar groups posted a combined loss of \$1.5bn in the first half of this year. In part, that reflects the fact that, amid a production glut, exporting Chinese-made panels has become more difficult.

September 29, 2025 China's Solar Installations Hit Record Low as Demand Softens China's domestic solar module installations plunged to a record low in August as rising prices and ...
