## Solar panels are broken a little

What happens if a solar panel is broken?

Common causes of solar panel damage are falling objects, thermal stress, and micro-cracks and scratches. A broken solar panel may continue to work, albeit at a reduced efficiency. Broken solar panels pose a serious fire and safety risk and must be removed and replaced. Some companies can fix broken solar panels, but this is costly.

Can a broken solar panel be replaced?

The general rule of thumb is that broken or scratched glass can be replaced if it hasn't caused any further damage to the solar panel. Any damage to the inner components requires the solar panel to be replaced.

Can I Fix Solar Panel Parts Myself?

Do cracked solar panels work?

Cracked panels work if we define a working panel as one that produces a current. At least most of the time, cracks don't damage the solar cells themselves. These cells are among a solar panel array's most critical components. Even if a solar cell has been damaged, that doesn't compromise the entire panel.

Can a cracked solar panel be reattached?

Most of the time if a solar panel is cracked, restoring it becomes impossible, and the broken parts can't be reattached. However, some people have found a way to restore them using see-through laminating film, polyurethane, or resin to cover the cracked glass and safeguard the solar cells.
