
Solar system that can be used as a roof

Can solar panels be installed on a roof?

Yes, solar panels can be installed on most roof types, including asphalt, metal and tile. However, the installation method may vary. 2.

What are the different types of solar roof systems?

There are two main product lines: The DecoTech system integrates solar panels into the roof structure, allowing a flush installation without separate racking. The Timberline Solar roof system uses solar shingles instead of traditional PV modules, and GAF has developed the first nailable solar shingle in the world.

What is a roof top solar system?

A roof top solar system may be preferable for homes with limited ground space. These systems feature both the solar panels and tank installed out of the way on the roof. For the days when the sun doesn't shine, the units come with a pre-installed thermostatically controlled electric booster.

How does a solar roof system work?

With a fully integrated solar roof system like SunStyle, a solar designer will place active shingles in the key locations and then complete the roof with similarly designed inactive shingles. Shingles that can be cut on site will be used to create a uniform look around vents, skylights, chimneys or other protrusions.
