The global 5G Base Station report also provides trends by market segments, technology, and investment with a competitive landscape.

What is a 5G base station?

A 5G base station is a fixed communication point that communicates with a single or more antenna as part of a network's wireless telephone system. It consists of a wireless receiver and a short-range transceiver that includes an antenna and analog-to-digital converters (ADCs) for digitally converting radio frequency signals.

What is a 5G standalone network?

These have been increasingly connected to the 5G core network, resulting in a mobile communications network that is operated exclusively on the basis of 5G technology and referred to as 5G standalone. By creating a complete 5G network infrastructure and using only 5G frequencies, the advantages of the new 5G technology can be better utilised.
