
What are the new energy micro inverters

What is a microinverter solar inverter?

Microinverters are a type of solar inverter technology installed at each panel. Microinverters offer many benefits, such as rapid shutdown capabilities, flexibility for panel layouts, and panel-level monitoring and diagnostics. Microinverters are typically more expensive than traditional string inverters.

Who makes the best microinverter?

Enphase Energy and APsystems are the most well-known microinverter manufacturers, while ZJBeny, Hoymiles & ZJ Beny recently entered the increasingly competitive market. The latest models added in 2024 are the new 3-phase IQ8-3P series from Enphase, the new SAJ M2 Series, and the NEO 2000M-X quad micro from Growatt.

How efficient is a microinverter?

An inverter's efficiency measures energy losses during the conversion from DC to AC electricity. The more efficient the microinverter, the more solar electricity production. Efficiency ratings are often measured under ideal conditions, but things like climate and weather contribute to a microinverter's actual efficiency.

Which microinverters are available in 2024?

The latest models added in 2024 are the new 3-phase IQ8-3P series from Enphase, the new SAJ M2 Series, and the NEO 2000M-X quad micro from Growatt. Since many of these microinverters have just become available, please provide any professional feedback here. Other inverter comparison charts:
