

# What does FE5 uninterruptible power supply mean

What does uninterruptible power supply do?

Before we answer the question of what does uninterruptible power supply do, it's essential to understand what a UPS is. An Uninterruptible Power Supply (UPS) is an electrical device that provides emergency power to a load when the input power source or mains power fails.

What is Eaton ferrups&#174; uninterruptible power system (UPS)?

The Eaton&#174; FERRUPS&#174; uninterruptible power system (UPS) series provides unmatched reliability in configurable power protection for computers and telecommunications equipment. Patented ferroresonant technology delivers "bulletproof" power protection against spikes, sags, surges, noise, and lightning.

How does an uninterruptible power supply work in standby mode?

It operates in standby mode until a power outage occurs. Here's how does a uninterruptible power supply work in standby mode: Normal Mode: The connected equipment is powered directly by the mains, and the UPS remains idle. Power Outage: When the mains power fails, the UPS switches to battery power and supplies the load.

How do uninterruptible power supplies work in an online UPS?

Here's how do uninterruptible power supplies work in an online UPS: Continuous Operation: In an online UPS, the rectifier converts incoming AC power into DC, which is then converted back to AC by the inverter. This double conversion ensures clean and stable power is always delivered to the load.
